No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

CONTENTS OF VOLUME 46

Number 1, July 1993

GUO-FAN YE, THOMAS W. MOORE, AND DOV JARON. Contributions of Oxygen Dissociation and Convection to the Behavior of a Compartmental Oxygen Transport Model 1

SHIN WAKUI, MASAKUNI FURUSATO, HIDETOSHI OHSHIGE, AND SHINICHIRO USHIGOME. Endothelial–Pericyte Interdigitations in Rat Subcutaneous Disc Implanted Angiogenesis 19

MAKOTO SUEMATSU, MASAYA ODA, HIDEKAZU SUZUKI, HIROSHI KANEKO, NORIHITO WATANABE, TADASU FURUSHO, SHOICHI MASUSHIGE, AND MASAHARU TSUCHIYA. Intravital and Electron Microscopic Observation of Ito Cells in Rat Hepatic Microcirculation 28

H. H. LIPOWSKY, L. E. CRAM, W. JUSTICE, AND M. J. EPPIHIMER. Effect of Erythrocyte Deformability on *in Vivo* Red Cell Transit Time and Hematocrit and Their Correlation with *in Vitro* Filterability 43

G. ALIEV, R. CIRILLO, E. SALVATICO, M. PARO, AND M. PROSDOCIMI. Changes in Vessel Ultrastructure during Ischemia and Reperfusion of Rabbit Hindlimb: Implications for Therapeutic Intervention 65

R. H. ADAMSON. Microvascular Endothelial Cell Shape and Size *in Situ* .. 77

P. W. HEWETT AND J. C. MURRAY. Human Lung Microvessel Endothelial Cells: Isolation, Culture, and Characterization 89

BRIEF COMMUNICATION

JONAS WADSTRÖM AND BENGT GERDIN. Vasomotion in the Totally Denervated Transplanted Rabbit Ear Chamber 103

Number 2, September 1993

JUDY M. MULLER, M. HAROLD LAUGHLIN, AND PAUL R. MYERS. Vasoactivity of Isolated Coronary Arterial Microvessels: Influence of Albumin 107

CATHERINE M. CIMINI AND HARVEY R. WEISS. Capillary Perfusion in the Occluded–Reperfused Canine Myocardium: Evidence for Slowed Reflow 116

BEATRICE ZAUGG-VESTI, JANINE DÖRFFLER-MELLY, MICHAEL SPIEGEL, SHENGHUA WEN, ULRICH K. FRANZECK, AND ALFRED BOLLINGER. Lymphatic Capillary Pressure in Patients with Primary Lymphedema 128

R. D'AMATO, E. WESOLOWSKI, AND L. E. HODGSON SMITH. Microscopic Visualization of the Retina by Angiography with High-Molecular-Weight Fluorescein-Labeled Dextrans in the Mouse..... 135

J. KOLSTON AND S. J. W. LISNEY. A Study of Vasodilator Responses Evoked by Antidromic Stimulation of Aδ Afferent Nerve Fibers Supplying Normal and Reinnervated Rat Skin 143

Gene R. DiResta, Jongbin Lee, Steven M. Larson, and Ehud Arbit. Characterization of Neuroblastoma Xenograft in Rat Flank. I. Growth, Interstitial Fluid Pressure, and Interstitial Fluid Velocity Distribution Profiles 158

Haruhiko Sago, Keiji Sugimoto, Sachiko Fujii, Kazuso Iinuma, Kazuo Yamashita, Michihiro Kitagawa, and Yoshiteru Terashima. Dynamic Changes in Stress Fiber Expression in Rat Uterine Vein Endothelial Cells Associated with Pregnancy 178

Mary D. S. Frame and Ingrid H. Sarelius. Arteriolar Bifurcation Angles Vary with Position and When Flow Is Changed 190

Yoshihiko Seino, Kiyoshi Ohki, Tatsuo Nakamura, Hiroshi Tsukamoto, Teruo Takano, Takumi Aramaki, Hidemasa Okumura, and Hirokazu Hayakawa. Pathophysiological Characteristics of Cutaneous Microcirculation in Patients with Liver Cirrhosis: Relationships to Cardiovascular Hemodynamics and Plasma Neurohormonal Factors 206

Technical Reports

G. Ray Martin and Rakesh K. Jain. Fluorescence Ratio Imaging Measurement of pH Gradients: Calibration and Application in Normal and Tumor Tissues 216

Ning Z. Wu, Bruce Klitzman, Gary Rosner, David Needham, and Mark W. Dewhirst. Measurement of Material Extravasation in Microvascular Networks Using Fluorescence Video-Microscopy .. 231

Brief Communication

Robert L. Hester. Uptake of Metabolites by Postcapillary Venules: Mechanism for the Control of Arteriolar Diameter 254

Number 3, November 1993

David Shepro. Editorial: 25th Anniversary iii

P. A. Wieringa, M. J. A. M. Van Putten, and B. R. Duling. A Technique for the Estimation of Plasma Flow in Single Capillaries Using Photobleached Dyes 263

G. Østgaard and R. K. Reed. Increased Negativity of Interstitial Fluid Pressure in Rat Skin Contributes to the Edema Formation Induced by Zymosan 283

Antal G. Hudetz, Andrew S. Greene, Gabriella Fehér, Derek E. Knuese, and Allen W. Cowley, Jr. Imaging System for Three-Dimensional Mapping of Cerebrocortical Capillary Networks *in Vivo* 293

H. R. Harty, K. D. Thornbury, and N. G. McHale. Neurotransmission in Isolated Sheep Mesenteric Lymphatics 310

Victor Rizzo, Richard Steinfeld, Chris Kyriakides, and David O. DeFouw. The Microvascular Unit of the 6-Day Chick Chorioallantoic Membrane: A Fluorescent Confocal Microscopic and Ultrastructural Morphometric Analysis of Endothelial Permselectivity 320

William J. Federspiel and Kalliopi Malai. Model Experiments on Measuring Flow in Microvessels Using Tracers 333

Gregory A. Breit, Donald E. Watenpaugh, Richard E. Ballard, and Alan R. Hargens. Acute Cutaneous Microvascular Flow Responses to Whole-Body Tilting in Humans 351

D. Bachir, A. Maurel, Y. Beuzard, M. Razavian, A. Kraiem, J. L. Portos, and F. Galacteros. Improvement of Microcirculation Abnormalities in Sickle Cell Patients upon Buflomedil Treatment 359

O. Lütolf, D. Chen, Th. Zehnder, and F. Mahler. Influence of Local Finger Cooling on Laser Doppler Flux and Nailfold Capillary Blood Flow Velocity in Normal Subjects and in Patients with Raynaud's Phenomenon 374

Technical Reports

Tianying Ren, Xi Lin, and Alfred L. Nuttall. Polarized-Light Intravital Microscopy for Study of Cochlear Microcirculation 383

G. R. Cokelet, R. Soave, G. Pugh, and L. Rathbun. Fabrication of *in Vitro* Microvascular Blood Flow Systems by Photolithography 394

Brief Communications

G. Caimi, R. Lo Presti, M. Montana, A. Serra, G. Girfò, B. Canino, A. Catania, and A. Sarno. Diabetes Mellitus: Mean Erythrocyte Aggregation, Glycometabolic Pattern, Red Cell Ca^{2+} Content, and Erythrocyte Membrane Dynamic Properties 401

Kan-ei Lee, Masatugu Iwamura, and Patrick M. Sluss. Experimental Antiangionesis Therapy using Cortisone Acetate in Murine Bladder Cancer: Independence from "Tumor Volume Effect" 406

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for photographic reproduction. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Style Manual,* 1986, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29,** 161–175.

ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. *In* "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, Eds.), pp. 99–134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index,* 1985. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

Personal Computer Disks. Manuscripts may be submitted to *Microvascular Research* on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing disks for typesetting conversion, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, Inc., 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6415; fax: (619) 699-6800).

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
